

PHP Engineer

Inhabited by inventive, motivated and talented people, our Development team enjoys designing, developing and rolling out key features and products that make a difference in the online experience.

As a PHP engineer, you will be called on to develop prototypes quickly, to create robust high-volume production applications and to write server-side code for web-based applications, both for internal and external use.

Main Tasks and Responsibilities:

- From the start you will be involved in decision making of the projects assigned to the team
- Armed with deep knowledge of Fnbox products, online trends and the business model details, you will design and develop large scale web applications, ensuring robust & lasting solutions are implemented
- Implement and launch highly-visible, user-facing features
- Understand and validate the requirements assigned according to business needs and projects objectives

Requirements:

- Informatics engineers students or recently graduated with strong academic records.
- Programming experience in PHP or other C language is a plus
- Knowledge of Symphony Framework and strong OO skills are highly valued
- Coding skills in Javascript/AJAX/JQuery, database design and SQL, and/or knowledge of TCP/IP and network programming are a plus.
- Ability to work in a high-volume and fast-paced environment is preferred
- Capacity of accomplishing projects respecting time patterns

About Fnbox Ventures Inc.

Founded in 2002, Fnbox is a leading Latin-American holding enterprise focused on the creation and development of global and scalable Internet companies which offer a variety of inventive solutions for our customer's everyday problems. Supported by our American investors and rewarded as a Great Place to Work in 2008, 2009 and 2010, we continually work to build a world class company to become a powerhouse of technology and innovation in our region.
